WORK EXPERIENCE

Software Engineer

Feb 2023 – Present

OPT – Optimization and Transport Planning

Porto, Portugal

Internship: Feb 2023 – Jun 2023 | Part-time: Mar 2023 – Jul 2025 | Full-time: Aug 2025 – Present

- Led frontend development and substantial UI/UX design for **MOTUS**, a React/.NET platform for monitoring Sustainable Urban Mobility Plans; designed interfaces in Figma, built reusable Nivo visualizations and configurable interfaces for different deployments, and helped ship a commercial product now used by multiple Portuguese municipalities.
- As the primary engineer on **O2MOVE**, modernized an inherited React/.NET application from React 16 and Create React App to React 18 and Vite, refactoring class components to hooks, replacing incompatible dependencies, and upgrading .NET Core 3.1 to .NET 8.
- Built new O2MOVE features for interactive public-information displays, including Leaflet stop clustering and integration with an external schematic-map service; developed touch-display behavior across multiple resolutions and validated the product on physical hardware before its deployment in Trofa.
- Designed and built a production **FastAPI** service integrating Copernicus, ERA5-Land, USGS Landsat 9 and NASA Earthdata for an external research team's wildfire-risk prediction model, including raster processing, HDF5-to-Parquet transformation, caching and STAC metadata.
- As sole developer, modernized a legacy software-licensing system from **.NET Framework** to **.NET 8**, replacing unsupported SOAP integration with a compatibility layer and exposing five licensing operations through a reusable ASP.NET Core REST API used by production applications.

TECHNICAL SKILLS

Languages	JavaScript/TypeScript, C#, Python, SQL
Frontend & Design	React, Next.js, Vite, HTML/CSS, Nivo, Recharts, Leaflet, Mapbox GL JS, Figma
Backend & Data	ASP.NET Core/.NET, FastAPI, REST APIs, Entity Framework Core, PostgreSQL
Geospatial & Processing	Rasterio, GeoTIFF, Parquet, STAC
Tools	Git, CI/CD, Swagger/OpenAPI, Linux, Nginx
Spoken Languages	Portuguese: Native English: Professional Proficiency

EDUCATION

Master of Informatics and Computing Engineering, Faculty of Engineering, University of Porto 2023 – 2025

Thesis: *Immersive Visualization of CI/CD Pipelines in Virtual Reality* (Grade: 17/20)

Bachelor of Informatics and Computing Engineering, Faculty of Engineering, University of Porto

2020 – 2023

SELECTED PROJECT

Immersive CI/CD Pipeline Visualization in Virtual Reality ([GitHub](#))

- Built a Unity-based VR system for exploring GitHub Actions CI/CD executions in 3D, implementing temporal pipeline visualizations and spatial audio to support structural analysis and failure identification.
- Evaluated the system in a 20-participant user study comparing task completion and debugging performance with the GitHub Actions interface.

LEADERSHIP & ACTIVITIES

BEST Porto – Contributed across IT, Marketing/Design and Corporate Relations, including development of the EBEC competition app and work with external partners.
